1/10 Machine Safety Checklist

Hey Joe, I'm getting reports about some engine issues. Can you come by to check it out?

Hey Jane, We'll be coming by later today to fix it up.

## Instant Overview of Potential Risks

### Monitor your machine health

Powerful sensors can detect potential machine breakdowns before you even realize there's a problem.

Machines in need of attention are ranked in terms of severity to help technicians know what to focus on first. This way, you can proactively prevent breakdowns and avoid unforeseen costs.

## Your Machine's Story

### Events, Live View, and History

All events - CAN faults, pre-checks, machine damage, and even overrun services - are listed in terms of importance, so service technicians can identify the exact source of a breakdown.

Machine events are logged, allowing you to easily backtrack and recount the machine's history. The graphical overview displays all past issues and actions.

## Follow and Get Notified

### Keep an eye on specific machines

A control center for each machine, right in the palm of your hand. Follow any machine to stay up-to-date on all its details, and never miss a single machine event or solution recommendation.

All types of incidents trigger notifications, giving you a jump start on fixing machine problems. Use the data to inform machine operators, service technicians, and site managers as you troubleshoot.

## Did you Know...?

The Event Reporting tool in Trackunit Go enables technicians to quickly log machine damage or issues.
