Hey Chris! I am seeing intermittent alarms on this unit. Please schedule a pickup.

Stay on Top of Fleet Activity

Map and track every movement, from anywhere

With this level of security, you always know where your machines are and what they are doing. Trackunit Manager offers high-level insight into fleet health, efficiency, and safety – even custom KPIs.

Learn the ins and outs of your equipment with customizable dashboards - access the data visualizations and analytics that matter most to you - and make the best use of your machines.

Machine Specifics

Deep dive into each machine

Machine and sensor-related data - like daily utilization reports, CAN fault codes, advanced sensor data, failed inspections, and overrun services - makes it easy to pinpoint what's triggering a need for attention.

Fleet managers can use this equipment data to quickly communicate about machine issues, causes, and solutions with machine operators and service technicians.

From Big Data to Real Insight

Make better decisions

Trackunit Manager brings you a multitude of telematics data, analytics, and visualizations, conveniently displayed in clickable, readable, dynamic charts.

Gain a comprehensive understanding of your fleet, and each machine in it, through data-driven analysis. With this knowledge, you can streamline operations and increase productivity, profitability, and brand value.
