

# TOTAL OVERVIEW. CONTROL. FOCUS.

 Trackunit Manager

Stay in control of your fleet. Trackunit Manager is the information and knowledge hub empowering fleet managers to boost efficiency, safety and machine up-time.

You get a complete view of everything you need to know - from high-level summaries down to specific machine details. Trust that nothing happens in your fleet without you knowing about it.

# Machine Specifics

*A deep dive into each machine*

Machine and sensor-related data like daily utilization reports, CAN fault codes, damage reports, failed inspections, and overrun services makes it easy to pinpoint what's triggering a need for attention alert.

Follow-up questions are easily communicated through instant chat. Fleet managers can quickly talk about specific machine issues, causes and solutions with machine operators and service technicians.

# From Big Data to Real Insight

*Make better decisions*

Trackunit Manager brings you a ton of telematics data, analytics, and visualization, nicely displayed and packaged together in clickable, readable, dynamic charts.

Through data-driven analysis, you have a full understanding of your entire fleet and every machine in it. With this knowledge, you can streamline operations and increase productivity, profitability and brand value. You can have it all.

# Stay on Top of Fleet Activity

*Always know what is happening with your fleet*

Map and track every movement, anywhere. With this level of security, you always know where your machines are and what they are doing. Trackunit Manager offers high-level insight into fleet health, efficiency and safety – even custom KPIs.

Know the what and whys of your equipment through customizable dashboards - the details, data visualizations and analytics are there to see what matters to you most and lets you get the best use out of your machine.

**Did you know...**

Trackunit Manager is built in a two-way split. In just a click, you can jump from the new Trackunit Manager to Manager Classic through the menu shortcut.
