

Track it anywhere.

No wires. No gateways.

Trackunit Spot S300

The next generation of battery-powered fleet tracking, built for construction.

Spot’s built-in cellular reports location and utilization data from mobile non-powered equipment, wherever it travels, straight into the Trackunit platform.

Technical Specifications

Engineered for construction.

Built for the demands of today’s jobsites, Spot S300 delivers unmatched performance, durability, and reliability. Globally certified to perform in extreme conditions.

Connectivity

- LTE Cat1 bis
- Global 4G coverage across 190+ countries

Physical

- Battery: 3.6V / 2 x 3.6Ah Li-SOCl2
- Size: 111 x 65 x 31 mm / 4.37 x 2.56 x 1.22 in
- Weight: 155g / 5.47 oz

IP Class

- IP66, IP67, IP69

Certification

- CE, FCC, ISED
- PTCRB, E1
- IEC 60068 series

Introduction

Stop losing track. Start losing less.

Unmonitored equipment is your biggest blind spot. Spot S300 closes the gap providing the visibility you need to make smarter fleet decisions.

Contractors

See more. Lose less. Build faster.

Leverage location and utilization insights across jobsites to reduce downtime, prevent loss, and keep crews working with the right equipment in the right place.

Rental Companies

Automate operations. Protect your fleet.

Know exactly where every asset is, when it moved, and whether it came back. Streamline pickups, recoveries, and depot management with always-on visibility across your entire rental fleet.

Get Started

Wire-free. No asset left behind.

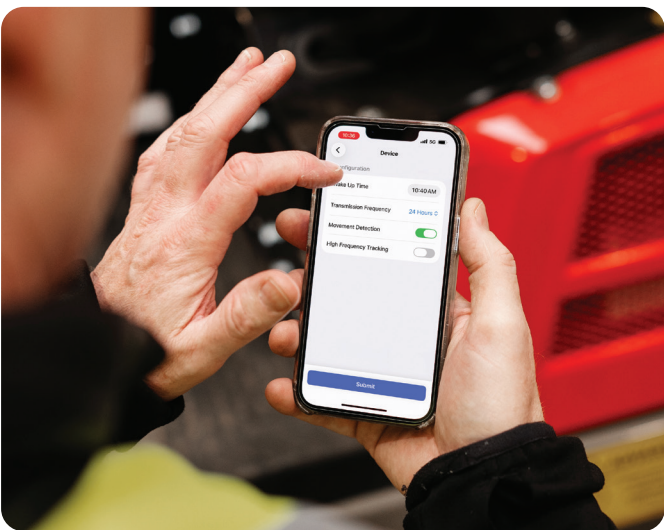

No wiring harness. No specialist tools. Spot S300 adds the valuable equipment that's never had telematics to your fleet map, alongside everything else. Connect trailers, containers, portable heaters, welders, message boards, and more, all online in minutes.

Battery Intelligence

Stay in control. Stay connected.

Spot S300 gives you real control over battery health and device performance. Battery intelligence brings together reporting frequency, life modelling, and Device Health alerts. Plan replacements at the depot before anything goes dark, and dial in transmission frequency to match your operation.

Use Cases

Real challenges. Real results.

From the depot to the jobsite and back, Spot S300 gives you the visibility and control to stay ahead of every asset, every day.

Asset location tracking

Find any asset across your site, yard, or depot.

Fast fleet onboarding

Scan, activate, and track. Get new or unmonitored assets online in seconds.

Unauthorized movement alerts

Geo and motion alerts keep your fleet secure around the clock.

Asset recovery

Continuous position updates to track and recover stolen or missing equipment fast.

Utilization monitoring

See which assets are working hardest and where demand is highest, then deploy accordingly.

Underused asset identification

Stop hoarding. Put underused equipment where it generates value.

Daily fleet check

Know exactly what's on site or depot, and what's ready to work before the day begins.

Depot and yard management

Know what arrived and what didn't return from any jobsite.

Off-rent pickup

Locate equipment fast, close contracts and get it back on rent sooner.
